MSK • Modular Survival Kit

MSK is a modular, emergency survival kit carrier designed to be mounted on Military aircraft. The purpose, to provide 72 hours worth of critical life support equipment in the event of an emergency egress.

Design

Originally designed for Military applications, MSK has the capacity to store ALSE (Aviation Life Support Equipment) as well as 100 ounces of water with its removable hydration bladder.

Storage is customizable. The various storage compartments and removable gear insert allow for unique mission configuration. The front face of the MSK is equipped with a grid of heavy duty webbing. This webbing allows you to attach auxiliary pouches securely to the MSK.

MSK can be worn as a backpack or carried by the top handle. Two lower straps are equipped along the bottom of the MSK to provide a sleep system connection point, if required.

Materials

Constructed out of water repellent, flame retardant, static dissipative materials. Military grade straps and buckles. High tensile strength threading.

The tie down assembly fastens the MSK securely to the aircraft and has been rated to withstand a 40 G crash rating.
