

FELLFAB® ENGINEERED PORTABLE STORAGE SOLUTIONS

Companies currently storing in corrugated boxes or bags can easily convert to bulk storage and realize substantial cost savings by utilizing the **FELCO® Silo System**.

The **FELCOLENE®** Woven Polyolefin liner is extremely durable. It is tear and puncture resistant and was designed to be compatible with most free-flowing granular substances. The **FELCO® Silo System** can be loaded pneumatically via stainless steel piping or machine fed by inserting wands into the discharge tubes that are located on the top or bottom of the silo.

A sturdy knock-down frame allows the **FELCO® Silo System** to be disassembled and reassembled with ease. The entire system is portable, it can be set up as required in various locations. The knock-down frame design stores the system neatly within minimal floor space when not in use.

BENEFITS OF THE PORTABLE **FELCO® SILO SYSTEM**

- Significantly reduces storage cost
- Portable - System can be set up & turn down as required
- Easy and rapid set up
- Convenient, eliminates the need to move around bags, boxes or drums
- Materials stored in one location, easy access
- Reduce contamination
- Eliminate outdoor climate problems, **FELCO® Silo System** can be set up indoors or outdoors
- Small foot print when in use
- Minimal storage space required when not in use
